Procedure for dealing with blood and body fluid spills

Please note that Det-Sol 5000 powder is hygroscopic, meaning that it draws in the moisture and disinfects upon contact, however, we suggest that the area be washed down with solution as a precautionary measure.

Det-Sol 5000 has been included in major Australian branded First Aid and Blood spill kits.

- Use protective gloves and mask
- Sprinkle one or more sachets of Det-Sol 5000 powder over affected area, depending on size of spill
- Leave for 30 seconds to 10 minutes depending upon volume of contaminant
- Cover with paper towel
- Remove paper towel and congealed mass disposing into double rubbish bag or bio-hazard bag.
- Add and dissolve one sachet of Det-Sol 5000 in one litre of water and wash down affected area with solution
- Dispose of all waste thoughtfully
